6. The field in which the government has laid the most stress is that of public health. Hundreds of doctors and nurses have been sent to villages which previously had no medical personnel. Much of their work has been devoted to teaching the people the importance of keeping clean and in getting inoculations and vaccinations against the more prevalent diseases. The government has made a fair success of this program. Doctors, however, are very reluctant to prescribe for patients, and surgeons often refuse to perform operations that are indicated. Doctors are often afraid of their patients who, if not satisfied, will complain to the local government, and the doctor will be in trouble. It is also very difficult to get rid of patients who have once been admitted to hospitals. Under the present regime, the patients must be satisfied and, since there are many tubercular patients who are happy to stay on at the hospitals, this has become quite a problem.
